

Claims

1. A raising wheel chair comprising:

a wheel frame;

a raising frame;

5 a lifting frame, and

a lifting device for adjusting a height level of the raising frame both in a sitting and in a standing position, said raising frame comprising a seat and a back rest, wherein the lifting device extends from a front region of the wheel frame to a front region of the raising frame and is of such a construction that on a lifting operation the raising frame is moved both
10 upward and forward.

2. The raising chair as claimed in claim 1, wherein a front edge of the seat is located at a distance from an axis around which the seat is rotated on raising.

15 3. The raising chair as claimed in claim 1, wherein the lifting device comprises on each side of the chair telescopic guide means.

4. The raising chair as claimed in claim 3, wherein the telescopic guide means have a forward inclination from bottom to top.

20 5. The raising chair as claimed in claim 1, wherein the wheel frame is provided with a middle wheel drive.

6. The raising chair as claimed in claim 1, comprising:

a knee restraint; and

means to move the knee restraint forward when a raising motion of the raising frame takes place.

5 7. The raising chair as claimed in claim 6, wherein the knee restraint is located on a downward extending tilting lever which is coupled to the raising frame.

8. The raising chair according to claim 1, wherein the seat comprises a front part and a back part.

9. The raising chair as claimed in claim 2, wherein the lifting device comprises on each side of the chair telescopic guide means.

10 10. The raising chair as claimed in claim 9, wherein the telescopic guide means have a forward inclination from bottom to top.

11. The raising chair as claimed in claim 10, wherein the wheel frame is provided with a middle wheel drive.

15 12. The raising chair as claimed in claim 11, comprising:
a knee restraint; and

means to move the knee restraint forward when a raising motion of the raising frame takes place.

20 13. The raising chair as claimed in claim 12, wherein the knee restraint is located on a downward extending tilting lever which is coupled to the raising frame.

14, A raising chair comprising:
a wheel frame;

a raising frame provided with a seat a back rest, a foot rest and a knee restraint; and

means to move the knee restraint forward when a raising motion of the raising frame takes place.
